

Intro to Java Week 5 Coding Assignment

Points possible: 70

Category	Criteria	% of Grade
Functionality	Does the code work?	25
Organization	Is the code clean and organized? Proper use of white space, syntax, and consistency are utilized. Names and comments are concise and clear.	25
Creativity	Student solved the problems presented in the assignment using creativity and out of the box thinking.	25
Completeness	All requirements of the assignment are complete.	25

Instructions: In Eclipse, or an IDE of your choice, write the code that accomplishes the objectives listed below. Ensure that the code compiles and runs as directed. Take screenshots of the code and of the running program (make sure to get screenshots of all required functionality) and paste them in this document where instructed below. Create a new repository on GitHub for this week's assignments and push this document, with your Java project code, to the repository. Add the URL for this week's repository to this document where instructed and submit this document to your instructor when complete.

Coding Steps:

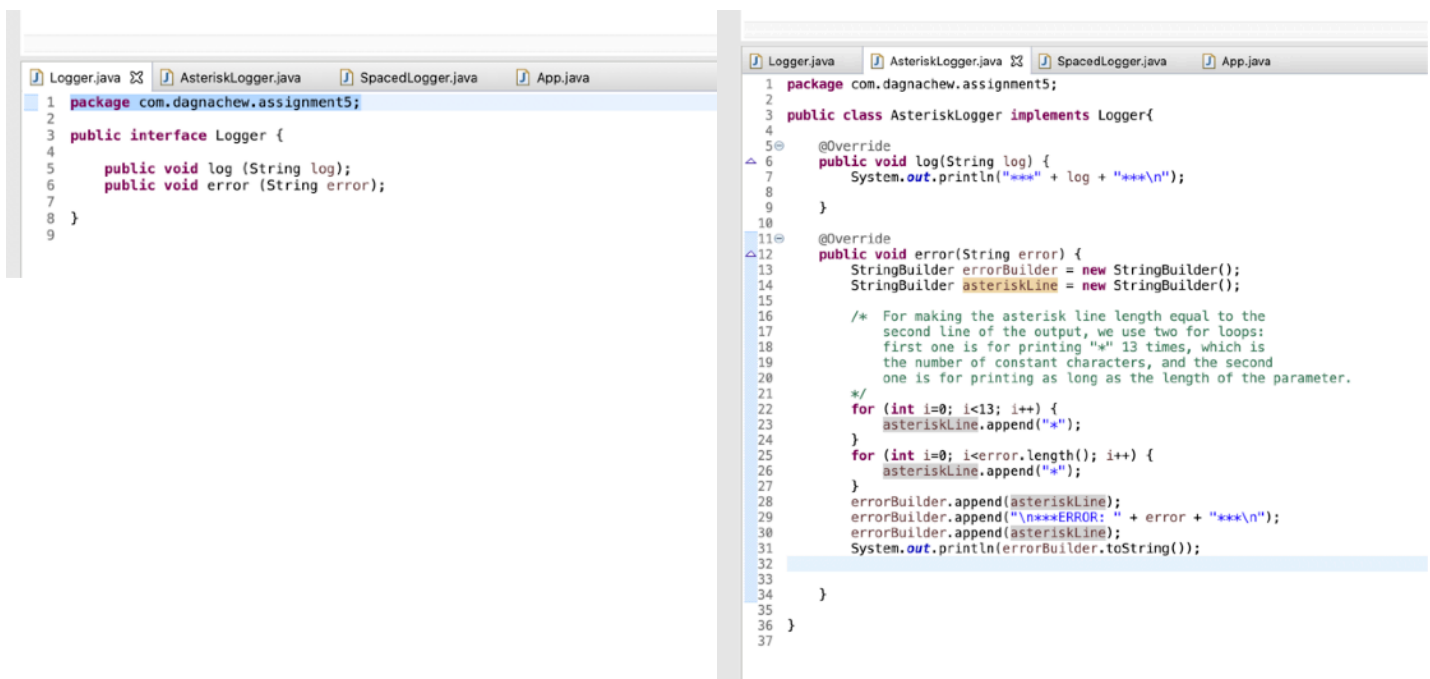

1. Create an interface named `Logger`.
2. Add two void methods to the `Logger` interface, each should take a `String` as an argument
 - a. `Log`
 - b. `Error`
3. Create two classes that implement the `Logger` interface
 - a. `AsteriskLogger`
 - b. `SpacedLogger`

- The log method on the AsteriskLogger should print out the String it receives between 3 asterisks on either side of the String (e.g. if the String passed in is “Hello”, then it should print `***Hello***` to the console.
- The error method on the AsteriskLogger should print the String it receives inside a box of asterisks, with the String preceded by the word “ERROR:”. For example, if “Hello” is the argument, the following should be printed:

```
*****  
  
***Error: Hello***  
  
*****
```

- The SpacedLogger should add spaces between each character of the String argument passed into its methods.
- If the log method received “Hello” as an argument, it should print `H e l l o`
- The error method should do the same, but with “ERROR:” preceding the spaced out input (i.e. `ERROR: H e l l o`)
- Create a class named App that has a main method.
- In this class instantiate an instance of each of your logger classes that implement the Logger interface.
- Test both methods on both instances, passing in Strings of your choice.

Screenshots of Code:

```
1 package com.dagnachew.assignment5;  
2  
3 public interface Logger {  
4  
5     public void log (String log);  
6     public void error (String error);  
7  
8 }  
9
```

```
1 package com.dagnachew.assignment5;  
2  
3 public class AsteriskLogger implements Logger{  
4  
5     @Override  
6     public void log(String log) {  
7         System.out.println("***" + log + "***\n");  
8     }  
9  
10  
11     @Override  
12     public void error(String error) {  
13         StringBuilder errorBuilder = new StringBuilder();  
14         StringBuilder asteriskLine = new StringBuilder();  
15  
16         /* For making the asterisk line length equal to the  
17          second line of the output, we use two for loops:  
18          first one is for printing "a" 13 times, which is  
19          the number of constant characters, and the second  
20          one is for printing as long as the length of the parameter.  
21  
22          */  
23         for (int i=0; i<13; i++) {  
24             asteriskLine.append("a");  
25         }  
26         for (int i=0; i<error.length(); i++) {  
27             asteriskLine.append("a");  
28         }  
29         errorBuilder.append(asteriskLine);  
30         errorBuilder.append("\n***ERROR: " + error + "***\n");  
31         errorBuilder.append(asteriskLine);  
32         System.out.println(errorBuilder.toString());  
33     }  
34 }  
35  
36 }  
37
```

```
1 package com.dagnachew.assignment5;
2
3 public class SpacedLogger implements Logger{
4
5     @Override
6     public void log(String log) {
7         StringBuilder logBuilder = new StringBuilder();
8         for (int i=0; i<log.length(); i++) {
9             logBuilder.append(log.charAt(i) + " ");
10        }
11        System.out.println("\n" + logBuilder.toString());
12    }
13
14    @Override
15    public void error(String error) {
16        StringBuilder errorBuilder = new StringBuilder();
17        for (int i=0; i<error.length(); i++) {
18            errorBuilder.append(error.charAt(i) + " ");
19        }
20        System.out.println("\nERROR: " + errorBuilder.toString());
21    }
22
23 }
24
25 }
26
```

```
1 package com.dagnachew.assignment5;
2
3 public class App {
4
5     public static void main(String[] args) {
6
7         Logger asteriskLog = new AsteriskLogger();
8         Logger asteriskError = new AsteriskLogger();
9         Logger spacedLog = new SpacedLogger();
10        Logger spacedError = new SpacedLogger();
11        asteriskLog.log("404 File Not Found!");
12        asteriskError.error("404 File Not Found!");
13        spacedLog.log("404 File Not Found!");
14        spacedError.error("404 File Not Found!");
15    }
16
17 }
18
19
```

Screenshots of Running Application:

```
<terminated> App (5) [Java Application] /Library/Java/JavaVirtualMachines/jdk1.8.0_261.jdk,
***404 File Not Found!***

*****
***ERROR: 404 File Not Found!***
*****

4 0 4   F i l e   N o t   F o u n d !

ERROR: 4 0 4   F i l e   N o t   F o u n d !
```
